

Greetings! So you've probably heard about the Call of Pripyat Razor crack fix by now, but for those who haven't here's a quick rundown. Call of Pripyat is a game that has had problems with certain features for years where people just couldn't get it to work because of bugs or other troubles. The result was that the game wouldn't load, you couldn't use certain features at all, and gameplay was just bad overall. The fix is an unofficial patch by Fabien Sanglard (AKA wghost) which fixes these problems and many more. But why is this a problem? Well, in my opinion Call of Pripyat is a great game in its own right, but it doesn't live up to its potential and falls short of its potential due to bugs. Of course no-one will ever get the full experience, but this has been very frustrating for many who play it and/or mod it. It's like having a bad movie that's ruined by an annoying sound or something. If we can fix this for people using new features it would be great! I'm sure there are lots of people saying things like: "Yeah yeah, blame the server" or "Blame Bethesda" etc. etc. The reason I'm doing this is because I want to fix a problem that many people have been having with a game that's just too good to be ruined by bugs. It would be great if we could give these users a chance to have the experience they deserve! Now before you accuse me of being a troll, remember that it's an unofficial patch so if you don't like it, don't use it. Now for the details: A game bug found by Fabien Sanglard (AKA wghost) was fixed. A game glitch (such as where red paint doesn't work) was fixed which was causing these issues. This is not an official patch for this game, but rather an unofficial one. It is a community patch. In case you don't know how to install this, here's a step by step guide: Download the RAR from the link listed below. Once downloaded, extract it with 7zip or WinRAR. Open up setup\_ap\_1\_2\_4.7z and copy the Razor folder into your Call of Pripyat directory (Default: C:\Program Files\Steam\steamapps\common\STALKER Call of Pripyat). If you have a different Steam installation directory, it will be different. Open up RazorSetup and select "Install". Have fun! :) The patch is available in the following locations: There are some requirements you must meet to use this:
